Topic 4

Topic 2

Topic 3

*HOME PAGE (Wireframe Sketch): Top navigation bar with canteen name and links to Home, About, Menu, Student Support, and Contact. Hero section with a large canteen image, a short headline describing the canteen, a brief tagline, and two buttons for viewing the menu and accessing student support. Features section highlighting pre-ordering, time-slot based pickup, and flexible payment options. A short highlight explaining the 4-hour no-penalty pay-later facility. Footer with college name and basic information.*

*ABOUT US PAGE (Wireframe Sketch): Page heading introducing the SGGSCC Canteen followed by a brief description of the canteen's purpose and student-centric approach. One supporting image of the canteen area. A short list of values including hygiene, affordability, speed, and transparency. Footer section consistent with other pages.*

*MENU / PRODUCTS PAGE (Wireframe Sketch): Page heading for menu display. Categorized list of selected food items under Snacks, Meals, and Beverages. A short note mentioning that the menu is curated for quick preparation during short college breaks. Footer at the bottom.*

*STUDENT SUPPORT PAGE (Wireframe Sketch): Page heading focused on student assistance. Section explaining the pay-later policy allowing students to complete payment within four hours in case of emergencies. Brief rules for fair usage of the facility. Footer consistent with the website.*

*CONTACT PAGE (Wireframe Sketch): Page heading for contact details. Section displaying canteen location within the college campus, operating hours, and general query information. Simple closing line encouraging feedback. Footer section.*

# Reporting

*1. Project Identification and Purpose*

*The SGGSCC Canteen was selected as the business for this project due to its relevance to student life and the daily challenges faced during peak break hours. Long queues, time constraints, and payment issues often lead to stress and inefficiency. The purpose of the website is to demonstrate how a simple digital interface can conceptually streamline food ordering, reduce waiting time, and improve overall organization within the canteen environment.*

*2. Target Audience*

*The primary target audience of the website is students of SGGSCC who use the canteen during short academic breaks. Secondary users include canteen staff who benefit conceptually from organized order flow and transparent order tracking. The design prioritizes clarity, speed, and accessibility for students accessing the site on mobile devices.*

*3. Design Approach and Styling Philosophy*

*The website follows a modern, student-friendly design approach with a balance of three visual tones: professional, homely, and playful. The styling avoids overly bright or harsh color combinations and instead uses muted dark backgrounds, soft contrasts, rounded elements, and subtle animations to create a calm yet engaging experience. The layout is intentionally minimal to prevent cognitive overload and ensure quick navigation.*

*4. Layout and Structure*

*The website is divided into multiple sections across five pages: Home, About, Menu, Student Support, and Contact. Each page follows a consistent layout structure with a fixed navigation bar at the top and a uniform footer at the bottom. Section spacing, alignment, and typography are kept consistent across pages to maintain visual harmony and improve usability*

*5. Typography and Color Scheme*

*Clean, sans-serif fonts are used to ensure readability across devices. Headings are visually distinct through size and weight rather than excessive color usage. The color palette primarily consists of dark charcoal backgrounds, light neutral text, and subtle accent tones to create an editorial and premium aesthetic suitable for a top-tier college environment.*

*6. Home Page Styling*

*The Home page features a hero section with a large canteen image, a concise headline, and call-to-action buttons directing users to the Menu and Student Support pages. Below the hero section, feature cards are used to visually highlight key concepts such as pre-ordering, time-slot pickup, and flexible payment options. Section backgrounds alternate subtly to create visual separation without clutter.*

*7. About Page Styling*

*The About page uses a clean, text-focused layout supported by a single authentic image of the canteen environment. Spacing and alignment are used to maintain a professional tone while conveying trust and transparency. The values section is presented clearly to communicate the canteen's student-first approach.*

*8. Menu Page Styling*

*The Menu page displays a curated selection of food items organized into clear categories. The styling prioritizes readability and quick scanning, allowing students to make decisions efficiently. The absence of excessive items ensures the page remains clean and uncluttered, reinforcing the concept of fast service during short breaks*

*9. Student Support Page Styling*

*The Student Support page is designed with simplicity and clarity in mind. It explains the four-hour no-penalty pay-later concept in a straightforward manner, addressing real student emergencies such as low battery or lack of immediate payment options. The layout is intentionally minimal to emphasize trust and fairness.*

*10. Contact Page Styling*

*The Contact page provides essential information such as location, operating hours, and general guidance for student queries. The design avoids complex forms and instead focuses on clarity and accessibility, ensuring students can quickly find relevant information*

Back to Agenda Page

*11. Tools and Technologies Used*

*The website is built using HTML for structure, CSS for styling and layout, and vanilla JavaScript for basic interactivity. The project is hosted using GitHub Pages, allowing free and reliable deployment of the static website.*

*12. Conclusion*

*This project demonstrates how thoughtful frontend design and styling can address real-world problems in a college environment. While the website is conceptual and frontend-only, it effectively showcases system thinking, user-centric design, and clean visual aesthetics. The project fulfills the objectives of the web development assignment while maintaining simplicity, usability, and professional presentation.*
